CARSON CITY:

A Bio Tran. -Through a private let-ter from Paisade, we learn that Pritchand started a team of twenty males to seven wagons for Eureka a few days ago and that it will be leaded on the back trip with timety the usend points of ballon! This is perhaps the biggest team that was ever hitched up for prac-tical purposes. In the early days of positive schoolers in California, it was common to see as high as twenty of the long-cured hiprids to a train of four wag-ens; but we do not recollect of ever having seen more than this number in a well adapted for this mode of transportation, being generally hard and measurably regular. We suppose that from the milroad to this point twice that number of animals and wagons could be piloted through with safety, but not advantage easly. We also glean from the same source that the country around Palisade is almost covered with crickets. We did not learn the genealogy of these insects, but we presume they are the same species of all-devouring pests that cov-ered the plains in that section last year. - Eureka Sentinel, 15.

THE Springfield Republican, which engit to know something of the movements in its own Congressional District, remarks: "Mr. Dawes's reported probable retirement from Congress grows out, not of any expected political advance-ment, as suspected, but of a flattering business proposition from a foreign banking-house, des i g largely in Amer-ican scentities. The question of its acceptance is probably not fully decided yet- his visit to Europe has to do with the subject—but we are encouraged to hope that he will remain in the public

A STRANGE REPTILE. -Dr.J. J. Woodward. United States array, has just re-ceived at the Army Medical Moscom in Washington the largest specimen of the ignum ortre lizard of South America that has ever been seen in the country. It was placed in a box which admitted plenty of air, and arrived safely and in seeningly good condition after its long waage, though it seems disinchined to le good natured over its e afficient or to make hew acquidatances. The reptile is almost entirely black, or a dark chocolate brown, is thirty inches long and on the top of the head has a large round prouterine Licenswelling while on each side of the head, near its base up ear similar immense balls. The eye is prominent, is very bright, and is of a mald hazel, or yellowish color, having the paper brown. The fore feet or hands have the fingers formed verylike the hu-man hand while the thumb or toe corresponsing to the human thumb is quite placet, and is large and round. The mation rescribling armor, and the body and tail som, at first glance to be free from scales, though a close examination shows the scales to be small and very moods the scales to be small and very groups. The reptile has not yet been identified as belonging to any species beretofore known, as if does not appear in Cavier. It is the intention of Dr. Woodward to kill it and prepare the skeleton for mounting, but i has been rangested that a cast in plaster be taken before killing, for exhibition in the colkction at the Smithsoni in Institute.
